

# **Pressure Transmitter**

#### OIL EXTRACTION EXPERIENCE

Viatran's years of oil field experience helps us solve typical application problems. The X09 was created as a solution to the application that a customer couldn't solve. Once solved, we modified the unit to accomplish even more in oil extraction.

### VIATRAN'S ALTERNATIVE

Viatran's unique fastening system locks under severe vibrations ensuring that the environmental integrity of the assembly is maintained much like a welded unit without welding.

### FINITE ELEMENT ANALYSIS

Instability can also come from subtle variations in the Hammer Union and tightening torque. These variances generate point loading of stress on the sensor. Viatran's product development engineers used Finite Element Analysis (FEA) to determine the most effective distribution of the strain gages to reduce the clamping effect. The resulting

eight gage sensor design is unaffected by the orientation or tightness of the nut. Using FEA, the "09" Series has been designed with high overpressure protection, allowing it to withstand pressure spikes found in oil field equipment.

### APPROVAL OPTIONS AVAILABLE

The 509 and 709 can be supplied with FM, CSA and ATEX intrinsically safe approvals and is designed to meet all applicable CE directives.

#### SEMI FLUSH

Our exclusive semi flush design provides a lower cavity volume to prevent clogging. This eliminates the need for tedious cleaning, especially in cementing applications.

Viatran is oil field proven. What often begins as a nagging application turns into a successful solution. The 09, and the various other oil and gas solutions are shining examples of this success.

# MODEL #509/709/809

Viatran's "09" Series pressure transmitters are equipped with a Hammer Union fitting for use in oil well cementing, fracturing and acidizing. They have been designed to be accurate yet rugged instruments ideally suited to the harsh oil field environment.

#### **FEATURE**

- FM, CSA and ATEX Intrinsically Safe Models available
- · Hammer Union pressure fitting
- · Shock and vibration resistant
- · Eight gage sensor design
- · Pressure up to 20,000 PSI

### TYPICAL APPLICATIONS

- · Oil well servicing
- Cementing
- Fracturing
- Acidizing
